

Why Bitcoin Soars

Retrieved Thursday 10th of August 2017 07:49:29 PM

< class="l">

POITOU, FRANCE – “It doesn’t seem real to me.”

A cousin, visiting from Maryland, probably spoke for millions of people.

The subject was bitcoin. And he was right. It’s not “real” in a traditional sense. You can’t touch it. You can’t see it. You can’t stack it up and count it out. You can’t put it in your pocket or tip the shoeshine boy with it.

And yet bitcoin... as money... is more real than the dollar. Like other real things, it is a prisoner of time.

Honest Money

Day after day, all week long, we’ve been dazzled by the numbers:

“I made another \$8,000 last night,” said the son with a satisfied air this morning. “I’m going to sell some of this one. And it’s so easy. You just go online and you can do it in real time. 24/7.

“Oh... and I’m up 80% on my Civic tokens.”

“Huh?”

The young man has been on the bitcoin case from the early days. In fact, he seems to have played a small and inadvertent role in its creation.

“I was working with Douglas Jackson on the e-gold project,” he explains.

“We were trying to create more reliable, more honest money. But it had a weakness: The government could shut it down. Which it did.

“I didn’t know it at the time, but the guy who is thought to be Satoshi Nakamoto, you know, the guy who created bitcoin, was watching what we were doing in Florida.

“When he saw Doug get shut down by the feds, he said he started to think about how you could create a decentralized system that the government couldn’t shut down.

“There are some specialized chat rooms with computer nerds who talk about these things. He worked out the key elements of bitcoin on one of them in the early 2000s. And the rest is, well, history.”

[I can't believe this "surfer dude" beat all those Wall Street legends...](#)

650 of the world's biggest and brightest minds... I'm talking about legends like Mario Gabelli... David Einhorn... Joel Greenblatt... and Rick Rieder... who, combined, manage more than \$5 trillion... All were forced to bow down to one "underdog" trader (pictured above) from Laguna Beach... [Click here](#) to discover the strategy he used while he had sand between his toes.

14,000% Gain

It's recent history. Bitcoin wasn't released until 2009 – fewer than 10 years ago. It now has a market cap of \$54 billion... going up almost every day.

"It's going up because it's real money," our in-house expert continued.

"And people need real money. Yesterday, you wrote about what caused the [21st century to be such a dud](#). You focused on the fact that the system is rigged. But you could just as well have focused on how the feds' fake-money system forces people into so many win-lose deals.

"That's how the Deep State got so big. It has access to almost unlimited funding... And that's why we waste so much money on wars and stupid regulations – because we don't know how much money we really have.

"If your savings appear to be unlimited, you may as well waste them. In fact, the concept of 'waste' makes no sense if there is no limit on money. And since we know there *is* a limit on real resources – time and money – we also know that today's dollars must be real.

"That's why the cryptos are moving up so much. It's limited, real money. It's the money people actually want and need.

"Overnight, NEO went up about 20%. In less than 24 hours. One of the other coins I have went up 43%. It's wild.

"I don't follow this carefully enough myself to know what to buy. Mostly, I just take Teeka Tiwari's advice [Teeka is an analyst who works with our research group in Florida]. He recommended NEO at 13 cents. It's now at \$23. That's about a 14,000% gain. It sounds ridiculous. But that's what's happening in this crypto world.

"And now the insiders are catching on," our expert continued.

"Fidelity is reporting bitcoin prices on its account statements. Goldman Sachs is making predictions about it, too; it says it expects bitcoin to hit \$3,900 this year. And it's offering bitcoin analysis to its clients. I don't know how in the world they could do that... It's pure guesswork as near as I can figure.

"Just this week, Vladimir Putin's government announced a \$100 million project in the bitcoin space. It was of 'strategic importance.'

"And pretty soon, central banks may begin buying cryptocurrencies. Then you're going to see some real fireworks."

[If this were a traditional class action lawsuit, it would literally be the biggest of all time...](#)

On Tuesday, September 5, 2017, approximately \$2.6 trillion may begin flooding America's economy – almost overnight. Remember the \$5 billion Exxon Valdez case of 2001? Well, this is 540 times bigger. You could walk out to your mailbox... weeks... and find a "check" for \$12,500... \$27,000... \$58,550... all the way up to \$127,895. You won't need to hire a lawyer... spend a dime on a five-minute phone call... or, God forbid, ever step foot in a courtroom. [President Trump has made ingeniously simple to collect your share of this \\$2.6 trillion "tax settlement."](#)

Here to Stay

A dull alarm went off in our brain.

Wait. Of course! The feds will use their fake money to buy real money. Why not? They have nearly unlimited buying power. They can buy as much cryptocurrency as they want – and who will care?

"There is a cap on the bitcoin money supply of 21 million bitcoins. Unless the system blows up, someone is going to own them all. So it's crazy for central banks to ignore them. This could be the world's next monetary base.

"Of course, it's still early days. Like the early days of the automobile, we don't know which of these jalopies will survive.

"And by the way, I read the feedback you're getting from your readers. One objection was that bitcoin won't work when electricity goes off.

"That's true. But imagine the person who says he won't buy a car because he's afraid gasoline may not be available so

"Of course, things go wrong. In the early days of the automobile, there were hundreds of competing auto companies. Most of them went out of business.

"The cars didn't work very well. They were uncomfortable. Dangerous. With very limited range. And the roads were horrible. Anyone who drove one was considered very daring.

"But the automobile was such an important innovation, it was unstoppable.

"That's the way it's going with cryptocurrencies. This is an idea whose time has come. They're here to stay."

Regards,
