

# How the Deep State Steals Your Tax Dollars in Just Four Steps

Retrieved Wednesday 2nd of August 2017 06:48:09 PM

No train in Gare Montparnasse ...

Our railway company, the SNCF, saw its signaling system break down the day when 38,000 passengers were traveling by the railway station ...

We decided to try our luck by taking the train on Monday ...

After buying a ticket, we had to change station ... storing us with the passengers of 4 trains trying to get together on one ...

In the end, we arrived two or three hours after our original estimate ...

Of course we have at least managed to reach the destination ... and we usually take the TGV ... and to adapt to delays and cancellations ...

You have in the SNCF an example of the inefficiency that occurs when the state runs part of the economy ... or an industry ...

You have a lack of responsibility ... of reliability ... and progress ...

On the other hand, in exchange, some of our elected representatives can benefit from the support of SNCF agents ... trade unions ... construction groups like Alstom ... plus localities that benefit from projects of this kind to obtain subsidies ...

Of course, our elected officials also share the gains with their partners in "the private ..."

Benefiting from the Paris-Bordeaux line, you have the Vinci group among others ...

Fortune.com:

"The Paris-Bordeaux ... obtained its funding through a partnership between the public and the private ... A consortium of companies, including the Vinci group, obtained the rights on its operation for a period of 50 years.

"Guillaume Pepy, president of the SNCF, told the newspaper Le Monde that the SNCF will lose 90 million euros for the year because of the price of access to the line ..."

No doubt you will have a continuation of the losses for years to come ... all at the expense of the taxpayer ... while groups of people like Vinci - having pipes at the Elysée or in the Minister of Transport - benefit ...

In spite of everything, the INSEE supports the decision to continue the construction of the line ...

"Despite the cost of installing a TGV line, a study by INSEE found in 2017 that the project supports the economy, helping companies to develop."

That's how our government works-

1. Your money is ing towards a size project - TGV line, Olympic, wind, and other ...
2. A group of strangers take advantage of it ...
3. Our elected representatives - with the support of INSEE and others - assert that "everything is fine ..."
4. Back to step # 1.

In short, the same story as always ...

Do not Lose Time on the "Weeds"

We were at the church on a Sunday this month ...

Without knowing it, we were among the Lutherans ... rather than the Catholics where we are used to surrendering.

We discovered a reading that we did not know before ...

You will find it in the Gospel according to St Matthew ...

You have an owner whose enemy has sown weed seeds in his field ...

"Should we not pluck these herbs," his servants ask?

"No," replied the master, "for you risk plucking the wheat at the same time by accident."

"Let them all grow ... then, at harvest time, we will keep the wheat and we will burn the rest."

What does the parable mean?

As always, you could read a variety of interpretations ... but, in doubt, let's take it for granted ...

Instead of trying to "fix" what is wrong, let's let things happen ...

... when the "harvest" comes, nature will put things back ...

In economics, you have no harvest ... and no judgment after death ...

On the other hand, you have the crises ...

When a crisis occurs, you see the "weeds" that have grown with wheat flaming ...

You can imagine that the size of the outbreak will depend on the amount of weeds ...

Here in France, with the government leading 60% of the economy ... thousands of pages of codes to govern all aspects of life ... and the equivalent of 100% of the GDP of debt to be repaid on the accounts of the State , The outbreak will gain momentum ...

What to do...?

We advised to have at least a little gold ... and see the Bitcoin ...

We also talked about the possibility of cultivating a garden ... what you can do even if you live in the city (provided you choose plants that need little space).

Besides, you can seek to settle elsewhere than in town ... to at least have a "backup plan."

For the moment, our advice has not changed ... We remain on the lookout for the next sign of danger to report.

Truly,

Henri Bonner
